Small molecules, Biotechnologies and biotherapies, Vaccine

☰ Types of Studies

Early phase research (I / I/II), Late phase research (II/III)

Other services

The Sorintellis platform allows users to input various data and generate accurate forecasts on clinical trial success probability. A priori forecasting of trial performance can help sponsors avoid failures or delays due to preventable events. Additionally, explainable machine learning used by the platform anticipates future events and enables appropriate corrective actions to mitigate risks during clinical trial planning and execution. Our solutions are targeted to Contract Research Organizations (CROs), pharmaceutical and biotech companies, and life sciences investment funds.
