:≡ Description

CATTI develops and delivers world-class training programs (online and in-person) for advanced therapy biomanufacturing according to Good Manufacturing Practices (GMP). Our goals are to create a pool of trained, qualified talent for aseptic work and to bridge the gap between academic qualifications and market-ready skills.

Key Collaborations/Partnerships

CATTI was created in March 2021 as part of a partnership between CellCAN, a network of excellence in knowledge mobilization for cell and gene therapies, and CCRM, a center of excellence for regenerative medicine commercialization.
